

Raphaël Chappert

Full-stack developer, React / TypeScript / Node.js, carbon and CSRD SaaS

Biarritz, France (remote, in Paris monthly) · hi@raphaelch.me · raphaelch.me · github.com/raphaelchpprt · linkedin.com/in/raphaelchappert

Full-stack developer since 2021 at two B2B carbon accounting and CSRD SaaS companies (GHG Protocol, French BEGES). A strong taste for design and user-centred products.

Experience

Kiosk · Full-stack developer · Remote 01/2026 – Present
4 developers, DDD architecture · React Router 7, TypeScript, Node.js, Prisma, PostgreSQL, Mantine, Zod.

- Largest contributor (67% of main-branch commits, 41 PRs) to the carbon accounting app that brought Kiosk's outsourced assessments in-house, for its consultants and clients.
- Designed duplicate detection for Excel imports (skip, replace or keep each row) so a file can be re-imported without data loss or duplication; took over and reworked the error review screen.
- Emission factors: French ADEME database, custom factors applied in bulk, kgCO₂e and tCO₂e calculations covered by tests. BEGES export, BEGES / GHG Protocol switch with scope breakdown.
- ESRS data collection questionnaires for CSRD reporting (~10 clients), with autosave, bulk actions, assignments and CSV export.
- Worked with Claude Code in verifiable steps: plan approved before coding, Vitest and Playwright tests written first, review against acceptance criteria. Set up Sentry (front and back end), reviewed 62 team PRs.
- Generated a 60-screen V2 prototype with Claude Code and reviewed it, basis for the redesign specs.

Impacti · Full-stack developer (front-end focus) · Remote 11/2021 – 06/2025
Carbon accounting SaaS (GHG Protocol) for ~20 mission-driven organisations: UN (UNFPA), World Bank, NGOs. 4 developers · React, Redux, Node.js / Express REST API, MongoDB, Material UI.

- Moved customisable dashboard calculations (dynamic filters, modular charts) from the browser to the server, added loading states.
- Non-financial data collection: dynamic assessment forms, CSV import, emissions APIs (Climatiq, flight data) to automate calculations.
- Built the notification centre end to end; hierarchical roles and permissions, admin area.
- Led the UX/UI redesign with an agency (3 months): brief, trade-offs, build, Storybook design system.

Personal projects 06/2025 – Present

- **pavillonnaire.zone**: map archive of French suburban housing culture (72 entries), created in 2020 by William Hermozo, which I have developed since 2025 (map legend and filters, detail views; faceted index in progress). Next.js, Mapbox.
- **signal-newsletter**: weekly tech digest written by a Claude agent (Anthropic API, web search), sent with Resend on a GitHub Actions schedule.
- **LaMap** (prototype, 2025): map of social and solidarity economy initiatives in France, PostGIS SQL functions, OpenStreetMap import. Next.js, Supabase, Tailwind, Jest.

Earlier career 2018 – 2021

- **Médecins du Monde** · Digital officer · 02/2021 – 11/2021: WordPress site redesign, SEO, newsletter.
- **TBM, Bordeaux public transport** · Survey interviewer (temp) · 2020: surveys for the network redesign.
- **Surfrider Foundation Europe** · Web communications volunteer · 04/2019 – 10/2019: website launch.
- **UNESCO, Oceanographic Commission** · Communications, intern then consultant · 04/2018 – 12/2018.

Education

The Hacking Project, web developer bootcamp · 01/2020 – 06/2020 · MixUp (React, Rails, Spotify API)

Sciences Po Toulouse, MA International Relations · 2016 – 2018

Université Bordeaux Montaigne, BA Geography · 2013 – 2016

Skills

Front end: React, TypeScript, React Router 7, Next.js, Redux, Mantine, Tailwind, Storybook, Mapbox

Back end: Node.js, Express, REST APIs, Prisma, SQL, PostgreSQL / PostGIS, Supabase, MongoDB, Zod

Testing and quality: unit and e2e testing (Vitest, Jest, Playwright), Sentry, GitHub Actions

AI: Claude Code, Anthropic API

Domain: carbon accounting (BEGES, GHG Protocol, ADEME database), CSRD / ESRS

Languages: French (native), English (C1), Spanish (B1)
